FARMERS NOTICE

Published in connection with agricultural extension work carried on by co-operation of the College of Agriculture, University of Kentucky, with the U. S. Department of Agriculture, and distributed in furtherance of the work provided for in the Act of Congress of May 8, 1914.

Give more time and attention to the garden
And produce a better quality of vegetables.
Rely on good seeds, good soil and good care.
Devote some time each day to care of the garden.
Every farmer's table should be supplied from his
Nown home garden.
Now is the time to plan your garden.

Make a list of all seed needed and order from some reliable firm.

Plant all the vegetables in rows as this makes cultivation easier.

Rotate the crops so as to prevent having the same vegetables on the same ground year after year.

Since the garden furnishes such a large amount of food it should receive an enormous amount of fertilizer. Well rotted farm manure is preferable to commercial fertilizers.

The plantings should be so arranged as to have a succession of crops that will furnish fresh vegetables during the entire season. To do this to the best advantage a definite plan of the garden must be made before planting time.
